Job Application for the role of Intern, Growth

Dear sir or madam,

Being someone who listens to brilliant music from Indie artists all the time, I only wonder how someone living in a very different corner of the world could connect with me. Thankfully, SoundCloud has just been the right platform helping millions of amazing artists get into the limelight. Instead of just passively appreciating the team that shares my same passion, I would love to work on such a remarkable platform and contribute as much as I can to this wonderful community.

I've completed one Engineering internship, and was offered a full-time position by the company's VP for my addition to getting the work done. I am devoted to the field of Computer Science and have been exploring several fields over the last couple of years. Recently, I've narrowed down my research interests to Natural Language Processing (NLP), Image Processing (IP) and Machine Learning (ML). I am sufficiently proficient with several front-end and back-end technologies, and open to work on either end of the spectrum. I have expanded my rhetorical skills greatly over the past years thanks to a fair level of public speaking during my internship and my tenure as a governor at my college's literary society.

I am a conscientious person who believes in hard work and attention to detail. I thoroughly enjoy working with a team, as it helps expand my thinking capabilities and ideas. I'm flexible and usually quick to pick up new skills. Thanks to the brilliant work culture currently instilled at SoundCloud, I believe I will be able to work at maximum efficiency and make more than satisfactory contributions to the project(s) allotted.

I look forward to speaking with you in further detail about the internship and opportunity with SoundCloud. I hope I'll get the chance to show you more of my abilities once I join your team.

Sincerely,

R Naresh
